

Ethan Bennett

Biology: Pre-Med

Background

My name is Ethan Bennett, and I am a senior Biology, Pre-Medical student who transferred to USCB in the Fall of 2021. I serve as a tutor, an orientation leader, and the President of Phi Sigma Gamma Chi, which is USCB's National Biological Honor Society. I enjoy helping my fellow peers in achieving academic success, being involved on campus, and spending time with my friends and family.

I chose USCB because it's close to home, and very close to the beach. After transferring to USCB, the faculty and staff welcomed me with open arms and provided extensive support for not only myself, but for every student on this campus. USCB is a great place to grow as a person and it provides many opportunities for students to get involved on campus.

I decided to major in Biology because I have always been intrigued with the study of life and the human body and how it functions. Majoring in Biology provided me with this information and so much more. I knew I would be taking the MCAT, the Medical College Admissions Test, and USCB's curriculum offered every prerequisite I need for medical school.

Favorite Class

I'd have to say that my favorite class is Organic Chemistry. It's my favorite because this class is named the hardest undergraduate college course on many different websites and is often referred to as the "Pre-Medical killer". I expected the class to be impossible, and I felt defeated before even taking it. However, I soon realized how to study for Organic Chemistry, and to me, it just felt like putting a puzzle together, and it challenged my critical thinking skills.

Best Piece of Advice

One piece of advice that I would offer a new student is to get involved on campus and take full advantage of all the opportunities USCB has to offer.

Fun Fact:

I sing, play the guitar, and write my own music in my free time.

Walterboro, South Carolina
